# BEFORE YOUR FIRST BREW

**IMPORTANT:** Ensure you prime your coffee maker before your first brew.

## TO PRIME YOUR COFFEE MAKER:

- 1 Clean all accessories before your first brew.
- 2 Plug in the power cord and the coffee maker will turn on automatically.
- 3 Lift the water reservoir off its base. Remove the reservoir lid. Fill the reservoir up to at least the 24 oz. line with fresh water and place it back on the base.
- 4 Open the coffee maker lid, remove the Ninja Pod Adapter and insert the Permanent Filter.
- 5 Place a 24 oz. cup under the nozzle and prime the system by running a 24 oz. Classic brew with water only.
- 6 Once the brew is complete, discard the water; coffee maker is now primed for use.

**NOTE:** If using the brewer in a high-altitude area, running a calibration brew is required. Not running a high-altitude calibration brew in a high-altitude area will result in excessive steaming during brewing. Refer to page 5 of the Owner's Guide for instructions on running a high-altitude calibration brew.
